To whom it may concern,

I supervised Noah as an Adjunct Associate Professor in the Department of Electrical Engineering at Columbia University for the Spring 2012 term. Noah taught the Linear Systems Theory course aimed for master's and Ph.D. students relating to the Control/System Theory track. The course subject matter includes rigorous mathematical development of basic topics in linear algebra, transform analysis, matrix algebra and control theory. He developed his own lectures, homeworks and exams. Noah is a positively motivated educator and scientist with a genuine interest in teaching and I highly recommend him for the position with your Department.

Sincerely,

Xiaodong Wang
Professor
